Component Instruction

Install & dismantle the Knife Cup

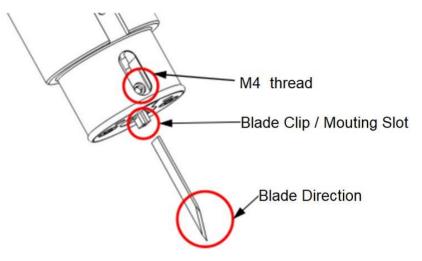

1. Make sure the oriented rivet on knife cup is aligned with the mounting slot on knife head.

2. Press hard on the knife cup to make it to go into shaft, when you hear a clicking sound, it means fitted in position.

- 3. Check and make sure that the knife cup up/down motion is smooth.
- 4. When push out the knife cup, please keep it in line with knife shaft, and do take care when doing this.

Install & dismantle the Knife Blade

<u>Install</u>

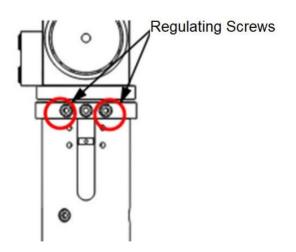

- 1. Loosen the M4 thread and insert the knife blade as the blade direction shown.
- 2. Insert the blade to the bottom (about 13mm)

3. Lock the M4 thread, rotate the small shaft on motor ends to ensure that the knife blade can slip down easily

Dismantle

Use the screwdriver to move the knife blade forward and backward to loosen it and fall off.

Regulate the Mounting Height

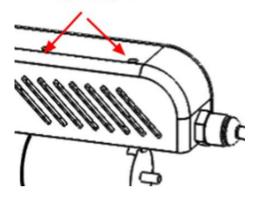

- 1. Loosen the regulating screws, 2 pieces on each side and 4 pieces in total.
- 2. Move and find a proper position, then fix the screws.

Regulate the Frequency

OTK91145-100W, OTK91214-100W Model

Regulating Holes

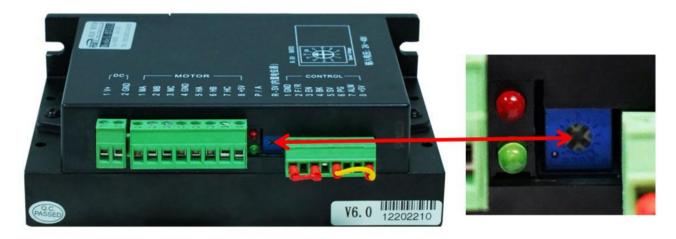

1. Find the regulating holes on the top of whole cutting head.

2. Use a small cross screwdriver to insert the hole, rotate clockwise and counter clockwise to regulate the oscillating frequency.

3. The regulating value is sensitive electronic component, please don't use excessive force

OTK91125-200W / OTK91113-200W Model

Use a precision screwdriver to turn the internal potentiometer. Turn the potentiometer clockwise to increase the speed.

Short circuit

or control signals

Oil maintenance

- 1. Lessen the top thread by 1.5 Allen wrench
- 2. Inject clean lube oil.

<u>Air Cooling</u>

Clean and dry compressed air pressure 0.2-0.5 mpa
